End time: Mon Aug 24 12:57:29 2026

Host Information

DNS Name: ControllerPC1.global.bcecorp.net

Netbios Name: CONTROLLERPC1

IP: 10.122.68.213

MAC Address: 00:0C:29:4B:4B:7C F4:6D:3F:CE:0E:32

OS: Microsoft Windows 11 IoT Enterprise LTSC Build 26100

Vulnerabilities

302873 - Windows Speculative Execution Configuration Check - Intel BHI (CVE-2022-0001)

Synopsis

The remote host has not properly mitigated a speculative execution vulnerability.

Description

The remote host has not properly mitigated a known speculative execution vulnerability. It, therefore, may be affected by :

- Intel Branch History Injection (BHI) (CVE-2022-0001)

-----

Recommended Settings 1:
- SYSTEM\CurrentControlSet\Control\Session Manager\Memory Management\
  FeatureSettingsOverrideMask: 0x00000003 (3)
- SYSTEM\CurrentControlSet\Control\Session Manager\Memory Management\
  FeatureSettingsOverride: 0x00800000 (8388608)
```

CVEs Covered:

CVE-2022-0001

Note: Mitigation for CVE-2022-0001 only. Combined mitigation for other speculative execution vulnerabilities may be required. Refer to vendor advisory or other recommended configurations below.

Recommended Settings 2:

- SYSTEM\CurrentControlSet\Control\Session Manager\Memory Management\FeatureSettingsOverrideMask: 0x00000003 (3)
- SYSTEM\CurrentControlSet\Control\Session Manager\Memory Management\FeatureSettingsOverride: 0x00802048 (8396872)

CVEs Covered:

CVE-2017-5715, CVE-2017-5753, CVE-2017-5754, CVE-2018-3615, CVE-2018-3620, CVE-2018-3639, CVE-2018-3646, CVE-2018-11091, CVE-2018-12126, CVE-2018-12127, CVE-2018-12130, CVE-2019-11135, CVE-2022-0001

Note: Hyper-Threading disabled.

Note: Most protections enabled by default on clients. Required combined mitigation for CVE-2022-0001.

Recommended Settings 3:

- SYSTEM\CurrentControlSet\Control\Session Manager\Memory Management\FeatureSettingsOverrideMask: 0x00000003 (3)
- SYSTEM\CurrentControlSet\Control\Session Manager\Memory Management\FeatureSettingsOverride: 0x00800048 (8388680)

CVEs Covered:

Note: Hyper-Threading enabled.

Note: M [...]

10114 - ICMP Timestamp Request Remote Date Disclosure

Synopsis

It is possible to determine the exact time set on the remote host.

Description

The remote host answers to an ICMP timestamp request. This allows an attacker to know the date that is set on the targeted machine, which may assist an unauthenticated, remote attacker in defeating time-based authentication protocols.

Timestamps returned from machines running Windows Vista / 7 / 2008 / 2008 R2 are deliberately incorrect, but usually within 1000 seconds of the actual system time.

Solution

Filter out the ICMP timestamp requests (13), and the outgoing ICMP timestamp replies (14).

Risk Factor

Low

VPR Score

3.2

EPSS Score

0.3159

CVSS v2.0 Base Score

2.1 (CVSS2#AV:L/AC:L/Au:N/C:P/I:N/A:N)

References

CVE	CVE-1999-0524
XREF	CWE:200

Plugin Information

Published: 1999/08/01, Modified: 2024/10/07

Plugin Output

icmp/0

```
This host returns non-standard timestamps (high bit is set)
```

10.122.68.213

The ICMP timestamps might be in little endian format (not in network format)
The difference between the local and remote clocks is 1 second.

16193 - Antivirus Software Check

Synopsis

An antivirus application is installed on the remote host.

Description

An antivirus application is installed on the remote host, and its engine and virus definitions are up to date.

45590 - Common Platform Enumeration (CPE)

Synopsis

It was possible to enumerate CPE names that matched on the remote system.

Description

By using information obtained from a Nessus scan, this plugin reports CPE (Common Platform Enumeration) matches for various hardware and software products found on a host.

Note that if an official CPE is not available for the product, this plugin computes the best possible CPE based on the information available from the scan.

171860 - Curl Installed (Windows)

Synopsis

Curl is installed on the remote Windows host.

Description

Curl, a command line tool for transferring data with URLs, was detected on the remote Windows host.

Please note, if the installation is located in either the Windows\System32 or Windows\SysWOW64 directory, it will be considered as managed by the OS. In this case, paranoid scanning is required to trigger downstream vulnerability checks. Paranoid scanning has no effect on this plugin itself.

10736 - DCE Services Enumeration

Synopsis

A DCE/RPC service is running on the remote host.

Description

By sending a Lookup request to the portmapper (TCP 135 or epmapper PIPE) it was possible to enumerate the Distributed Computing Environment (DCE) services running on the remote port. Using this information it is possible to connect and bind to each service by sending an RPC request to the remote port/pipe.

Description : Unknown RPC service
Type : Remote RPC service
TCP Port : 49666
IP : 10.122.68.213

10736 - DCE Services Enumeration

Synopsis

A DCE/RPC service is running on the remote host.

Description

By sending a Lookup request to the portmapper (TCP 135 or epmapper PIPE) it was possible to enumerate the Distributed Computing Environment (DCE) services running on the remote port. Using this information it is possible to connect and bind to each service by sending an RPC request to the remote port/pipe.

Info logs:
```

```
- intel_dtt_detect.nbin reported 1 log
```

```
Errors:
```

```
- smb_hotfixes.nasl reported 2 logs
```

86420 - Ethernet MAC Addresses

Synopsis

This plugin gathers MAC addresses from various sources and consolidates them into a list.

Description

This plugin gathers MAC addresses discovered from both remote probing of the host (e.g. SNMP and Netbios) and from running local checks (e.g. ifconfig). It then consolidates the MAC addresses into a single, unique, and uniform list.

Solution

```

46215 - Inconsistent Hostname and IP Address

Synopsis

The remote host's hostname is not consistent with DNS information.

Description

The name of this machine either does not resolve or resolves to a different IP address.

This may come from a badly configured reverse DNS or from a host file in use on the Nessus scanning host.

As a result, URLs in plugin output may not be directly usable in a web browser and some web tests may be incomplete.

Solution

Fix the reverse DNS or host file.

Risk Factor

104854 - Malicious Process Detection: Authenticode Signed Bad Date

Synopsis

Nessus found trusted signed processes for which today's date falls outside of the Not Before and Not After certificate dates on the remote host.

Description

Running processes that are signed and trusted but today's date falls outside of the Not Before and Not After certificate dates. These processes still validate as trusted.

See Also

<http://www.nessus.org/u?6a0123a1>

<http://www.nessus.org/u?c7777bf7>

Solution

Obtain an updated version from the vendor that has been signed with a newer certificate.

Risk Factor

None

20811 - Microsoft Windows Installed Software Enumeration (credentialed check)

Synopsis

It is possible to enumerate installed software.

Description

This plugin lists software potentially installed on the remote host by crawling the registry entries in :

HKLM\SOFTWARE\Microsoft\Windows\CurrentVersion\Uninstall HKLM\SOFTWARE\Microsoft\Updates

Note that these entries do not necessarily mean the applications are actually installed on the remote host - they may have been left behind by uninstallers, or the associated files may have been manually removed.

Solution

Remove any applications that are not compliant with your organization's acceptable use and security policies.

Risk Factor

None

178102 - Microsoft Windows Installed Software Version Enumeration

Synopsis

Enumerates installed software versions.

Description

This plugin enumerates the installed software version by interrogating information obtained from various registry entries and files on disk. This plugin provides a best guess at the software version and a confidence level for that version.

Note that the versions detected here do not necessarily indicate the actual installed version nor do they necessarily mean that the application is actually installed on the remote host. In some cases there may be artifacts left behind by uninstallers on the system.

Solution

Remove any applications that are not compliant with your organization's acceptable use and security policies.

Risk Factor

The following password policy is defined on the remote host:

```
Minimum password len: 14
Password history len: 24
Maximum password age (d): 90
Password must meet complexity requirements: Enabled
Minimum password age (d): 0
Forced logoff time (s): 0
Locked account time (s): 1800
Time between failed logon (s): 900
Number of invalid logon before locked out (s): 5
```

38689 - Microsoft Windows SMB Last Logged On User Disclosure

Synopsis

Nessus was able to identify the last logged on user on the remote host.

Description

By connecting to the remote host with the supplied credentials, Nessus was able to identify the username associated with the last successful logon.

Microsoft documentation notes that interactive console logons change the DefaultUserName registry entry to be the last logged-on user.

```

10859 - Microsoft Windows SMB LsaQueryInformationPolicy Function SID Enumeration

Synopsis

It is possible to obtain the host SID for the remote host.

Description

By emulating the call to LsaQueryInformationPolicy(), it was possible to obtain the host SID (Security Identifier).

The host SID can then be used to get the list of local users.

See Also

<http://technet.microsoft.com/en-us/library/bb418944.aspx>

Solution

You can prevent anonymous lookups of the host SID by setting the 'RestrictAnonymous' registry setting to an appropriate value.

Refer to the 'See also' section for guidance.

Risk Factor

None

Architecture = x64
Build lab extended = 26100.1.amd64fre.ge_release.240331-1435
```

11457 - Microsoft Windows SMB Registry : Winlogon Cached Password Weakness

Synopsis

User credentials are stored in memory.

Description

The registry key 'HKLM\Software\Microsoft\WindowsNT\CurrentVersion\Winlogon\CachedLogonsCount' is not 0. Using a value greater than 0 for the CachedLogonsCount key indicates that the remote Windows host locally caches the passwords of the users when they login, in order to continue to allow the users to login in the case of the failure of the primary domain controller (PDC).

Cached logon credentials could be accessed by an attacker and subjected to brute force attacks.

```

10456 - Microsoft Windows SMB Service Enumeration

Synopsis

It is possible to enumerate remote services.

Description

This plugin implements the SvcOpenSCManager() and SvcEnumServices() calls to obtain, using the SMB protocol, the list of active and inactive services of the remote host.

An attacker may use this feature to gain better knowledge of the remote host.

Solution

To prevent the listing of the services from being obtained, you should either have tight login restrictions, so that only trusted users can access your host, and/or you should filter incoming traffic to this port.

Risk Factor

None

10395 - Microsoft Windows SMB Shares Enumeration

Synopsis

It is possible to enumerate remote network shares.

Description

By connecting to the remote host, Nessus was able to enumerate the network share names.

Solution

n/a

Risk Factor

None

Plugin Information

Published: 2000/05/09, Modified: 2022/02/01

Plugin Output

tcp/445/cifs

```
Here are the SMB shares available on the remote host when logged in as Beckman Coulter:
```

- ADMIN\$
- C\$
- IPC\$

100871 - Microsoft Windows SMB Versions Supported (remote check)

Synopsis

It was possible to obtain information about the version of SMB running on the remote host.

Description

Nessus was able to obtain the version of SMB running on the remote host by sending an authentication request to port 139 or 445.

Note that this plugin is a remote check and does not work on agents.

Solution

n/a

Risk Factor

None

Plugin Information

Published: 2017/06/19, Modified: 2019/11/22

Plugin Output

tcp/445/cifs

```
The remote host supports the following versions of SMB :  
SMBv2
```

106716 - Microsoft Windows SMB2 and SMB3 Dialects Supported (remote check)

Synopsis

It was possible to obtain information about the dialects of SMB2 and SMB3 available on the remote host.

Description

Nessus was able to obtain the set of SMB2 and SMB3 dialects running on the remote host by sending an authentication request to port 139 or 445.

Solution

n/a

Risk Factor

None

Plugin Information

Published: 2018/02/09, Modified: 2020/03/11

Plugin Output

tcp/445/cifs

```
The remote host supports the following SMB dialects :
_version_   _introduced in windows version_
2.0.2       Windows 2008
2.1         Windows 7
3.0         Windows 8
3.0.2       Windows 8.1
3.1.1       Windows 10

The remote host does NOT support the following SMB dialects :
_version_   _introduced in windows version_
2.2.2       Windows 8 Beta
2.2.4       Windows 8 Beta
3.1         Windows 10
```

92368 - Microsoft Windows Scripting Host Settings

Synopsis

Nessus was able to collect and report the Windows scripting host settings from the remote host.

Description

Nessus was able to collect system and user level Windows scripting host settings from the remote Windows host and generate a report as a CSV attachment.

Solution

n/a

Risk Factor

None

Plugin Information

Published: 2016/07/19, Modified: 2018/05/23

Plugin Output

tcp/0

```
HKLM\SOFTWARE\Microsoft\Windows Script Host\Settings\displaylogo : 1
HKLM\SOFTWARE\Microsoft\Windows Script Host\Settings\usewinsafer : 1
HKLM\SOFTWARE\Microsoft\Windows Script Host\Settings\silentterminate : 0

```

Windows scripting host configuration attached.

200493 - Microsoft Windows Start Menu Software Version Enumeration

Synopsis

Enumerates Start Menu software versions.

Description

This plugin enumerates the installed software version by interrogating information obtained from various registry entries and files on disk. This plugin provides a best guess at the software version and a confidence level for that version.

Note that the versions detected here do not necessarily indicate the actual installed version nor do they necessarily mean that the application is actually installed on the remote host. In some cases there may be artifacts left behind by uninstallers on the system.

Solution

Remove any applications that are not compliant with your organization's acceptable use and security policies.

Risk Factor

None

Plugin Information

Published: 2024/06/13, Modified: 2026/07/17

Plugin Output

tcp/445/cifs

```
The following software information is available on the remote host :

- Calculator.lnk
  .lnk Path      : C:\ProgramData\Microsoft\Windows\Start Menu\Programs\Calculator.lnk
  Target         : C:\windows\system32\win32calc.exe
  Version        : 10.0.26100.7019

```

58452 - Microsoft Windows Startup Software Enumeration

Synopsis

It is possible to enumerate startup software.

Description

This plugin lists software that is configured to run on system startup by crawling the registry entries in :

- HKLM\SOFTWARE\Microsoft\Windows\CurrentVersion\Run
- HKLM\SOFTWARE\Wow6432Node\Microsoft\Windows\CurrentVersion\Run

Solution

Review the list of applications and remove any that are not compliant with your organization's acceptable use and security policies.

Risk Factor

None

Plugin Information

Published: 2012/03/23, Modified: 2022/02/01

Plugin Output

tcp/445/cifs

The following startup item was found :

```
RtkAudUService - C:\windows\System32\DriverStore\FileRepository  
\realtekservice.inf_amd64_bba237ccabc539bf\RtkAudUService64.exe  
SecurityHealth - %windir%\system32\SecurityHealthSystray.exe
```

92369 - Microsoft Windows Time Zone Information

Synopsis

Nessus was able to collect and report time zone information from the remote host.

Description

Nessus was able to collect time zone information from the remote Windows host and generate a report as a CSV attachment.

Solution

```

35730 - Microsoft Windows USB Device Usage Report

Synopsis

It was possible to get a list of USB devices that may have been connected to the remote system in the past.

Description

Using the supplied credentials, this plugin enumerates USB devices that have been connected to the remote Windows host in the past.

See Also

http://www.forensicswiki.org/wiki/USB_History_Viewing

Solution

Make sure that the use of USB drives is in accordance with your organization's security policy.

Risk Factor

None

Plugin Information

Published: 2009/02/24, Modified: 2022/06/01

Plugin Output

tcp/445/cifs

```
The following is a list of USB devices that have been connected
to remote system at least once in the past :
```

```
Device Name : General UDisk USB Device
Last Inserted Time : unknown
```

```
First used : unknown
```

```
Device Name : Kingston DataTraveler 3.0 USB Device
Last Inserted Time : Jan. 29, 2025 at 15:11:01 GMT
```

```
First used : unknown
```

```
(Note that for a complete listing of 'First used' times you should
run this test with the option 'thorough_tests' enabled.)
```

19506 - Nessus Scan Information

Synopsis

This plugin displays information about the Nessus scan.

Description

This plugin displays, for each tested host, information about the scan itself :

- The version of the plugin set.
- The type of scanner (Nessus or Nessus Home).
- The version of the Nessus Engine.
- The port scanner(s) used.
- The port range scanned.
- The ping round trip time
- Whether credentialed or third-party patch management checks are possible.
- Whether the display of superseded patches is enabled
- The date of the scan.
- The duration of the scan.
- The number of hosts scanned in parallel.
- The number of checks done in parallel.

Max checks : 5
Recv timeout : 5
Backports : None
Allow post-scan editing : Yes
Nessus Plugin Signature Checking : Enabled
Audit File Signature Checking : Disabled
Scan Start Date : 2026/8/24 12:32 India Standard Time (UTC +05:30)
Scan duration : 1510 sec
Scan for malware : yes
Fully Scan Operational Technology devices : no
Safely Scan Operational Technology devices with OT Discovery : no
```

64582 - Netstat Connection Information

Synopsis

Nessus was able to parse the results of the 'netstat' command on the remote host.

Description

The remote host has listening ports or established connections that Nessus was able to extract from the results of the 'netstat' command.

Note: The output for this plugin can be very long, and is not shown by default. To display it, enable verbose reporting in scan settings.

209654 - OS Fingerprints Detected

Synopsis

Multiple OS fingerprints were detected.

Description

Using a combination of remote probes (TCP/IP, SMB, HTTP, NTP, SNMP, etc), it was possible to gather one or more fingerprints from the remote system. While the highest-confidence result was reported in plugin 11936, "OS Identification", the complete set of fingerprints detected are reported here.

Solution

11936 - OS Identification

Synopsis

It is possible to guess the remote operating system.

Description

Using a combination of remote probes (e.g., TCP/IP, SMB, HTTP, NTP, SNMP, etc.), it is possible to guess the name of the remote operating system in use. It is also possible sometimes to guess the version of the operating system.

Solution

The remote host is running Microsoft Windows 11 IoT Enterprise LTSC Build 26100
```

117887 - OS Security Patch Assessment Available

Synopsis

Nessus was able to log in to the remote host using the provided credentials and enumerate OS security patch levels.

Description

Nessus was able to determine OS security patch levels by logging into the remote host and running commands to determine the version of the operating system and its components. The remote host was identified as an operating system or device that Nessus supports for patch and update assessment. The necessary information was obtained to perform these checks.

```
No patch supersedence data found.  
Plugin debug log has been attached.
```

110095 - Target Credential Issues by Authentication Protocol - No Issues Found

Synopsis

Nessus was able to log in to the remote host using the provided credentials. No issues were reported with access, privilege, or intermittent failure.

Description

Valid credentials were provided for an authentication protocol on the remote target and Nessus did not log any subsequent errors or failures for the authentication protocol.

When possible, Nessus tracks errors or failures related to otherwise valid credentials in order to highlight issues that may result in incomplete scan results or limited scan coverage. The types of issues that are tracked include errors that indicate that the account used for scanning did not have sufficient permissions for a particular check, intermittent protocol failures which are unexpected after the protocol has been negotiated successfully earlier in the scan, and intermittent authentication failures which are unexpected after a credential set has been accepted as valid earlier in the scan. This plugin reports when none of the above issues have been logged during the course of the scan for at least one authenticated protocol. See plugin output for details, including protocol, port, and account.

Please note the following :

- This plugin reports per protocol, so it is possible for issues to be encountered for one protocol and not another.

For example, authentication to the SSH service on the remote target may have consistently succeeded with no privilege errors encountered, while connections to the SMB service on the remote target may have failed intermittently.

- Resolving logged issues for all available authentication protocols may improve scan coverage, but the value of resolving each issue for a particular protocol may vary from target to target depending upon what data (if any) is gathered from the target via that protocol and what particular check failed. For example, consistently successful checks via SSH are more critical for Linux targets than for Windows targets, and likewise consistently successful checks via SMB are more critical for Windows targets than for Linux targets.

User: '10.122.68.213\Beckman Coulter'
Port: 445
Proto: SMB
Method: password

141118 - Target Credential Status by Authentication Protocol - Valid Credentials Provided

Synopsis

Valid credentials were provided for an available authentication protocol.

Description

Nessus was able to determine that valid credentials were provided for an authentication protocol available on the remote target because it was able to successfully authenticate directly to the remote target using that authentication protocol at least once. Authentication was successful because the authentication protocol service was available remotely, the service was able to be identified, the authentication protocol was able to be negotiated successfully, and a set of credentials provided in the scan policy for that authentication protocol was accepted by the remote service. See plugin output for details, including protocol, port, and account.

Please note the following :

- This plugin reports per protocol, so it is possible for valid credentials to be provided for one protocol and not another. For example, authentication may succeed via SSH but fail via SMB, while no credentials were provided for an available SNMP service.
- Providing valid credentials for all available authentication protocols may improve scan coverage, but the value of successful authentication for a given protocol may vary from target to target depending upon what data (if any) is gathered from the target via that protocol. For example, successful authentication via SSH is more valuable for Linux targets than for Windows targets, and likewise successful authentication via SMB is more valuable for Windows targets than for Linux targets.

```

161691 - The Microsoft Windows Support Diagnostic Tool (MSDT) RCE Workaround Detection (CVE-2022-30190)

Synopsis

Checks for the HKEY_CLASSES_ROOT\ms-msdt registry key.

Description

The remote host has the HKEY_CLASSES_ROOT\ms-msdt registry key. This is a known exposure for CVE-2022-30190.

Note that Nessus has not tested for CVE-2022-30190. It is only checking if the registry key exists. The recommendation is to apply the latest patch.

162174 - Windows Always Installed Elevated Status

Synopsis

Windows AlwaysInstallElevated policy status was found on the remote Windows host

Description

Windows AlwaysInstallElevated policy status was found on the remote Windows host.

You can use the AlwaysInstallElevated policy to install a Windows Installer package with elevated (system) privileges. This option is equivalent to granting full administrative rights, which can pose a massive security risk. Microsoft strongly discourages the use of this setting.

Solution

If enabled, disable AlwaysInstallElevated policy per your corporate security guidelines.

Risk Factor

None

Plugin Information

Published: 2022/06/14, Modified: 2022/06/14

Plugin Output

tcp/445/cifs

```
AlwaysInstallElevated policy is not enabled under HKEY_LOCAL_MACHINE.  
AlwaysInstallElevated policy is not enabled under HKEY_USERS  
user:S-1-5-21-2926002056-1208282642-2009701260-1001
```

48337 - Windows ComputerSystemProduct Enumeration (WMI)

Synopsis

It is possible to obtain product information from the remote host using WMI.

Description

By querying the WMI class 'Win32_ComputerSystemProduct', it is possible to extract product information about the computer system such as UUID, IdentifyingNumber, vendor, etc.

- Version         : None
```

159817 - Windows Credential Guard Status

Synopsis

Retrieves the status of Windows Credential Guard.

Description

Retrieves the status of Windows Credential Guard.

Credential Guard prevents attacks such as such as Pass-the-Hash or Pass-The-Ticket by protecting NTLM password hashes, Kerberos Ticket Granting Tickets, and credentials stored by applications as domain credentials.

164690 - Windows Disabled Command Prompt Enumeration

Synopsis

This plugin determines if the DisableCMD policy is enabled or disabled on the remote host for each local user.

Description

The remote host may employ the DisableCMD policy on a per user basis. Enumerated local users may have the following registry key:

'HKLM\Software\Policies\Microsoft\Windows\System\DisableCMD'

- Unset or 0: The command prompt is enabled normally.
- 1: The command prompt is disabled.
- 2: The command prompt is disabled however windows batch processing is allowed.

159929 - Windows LSA Protection Status

Synopsis

Windows LSA Protection is disabled on the remote Windows host.

Description

The LSA Protection validates users for local and remote sign-ins and enforces local security policies to prevent reading memory and code injection by non-protected processes. This provides added security for the credentials that the LSA stores and manages. This protects against Pass-the-Hash or Mimikatz-style attacks.

Solution

Enable LSA Protection per your corporate security guidelines.

Risk Factor
